

GENERAL INFORMATION

In response to public concern about the density of roads and vehicular traffic in deer hunting areas during the deer season, the California Department of Fish and Game (DFG), the Plumas County Fish and Game Commission, and the US Forest Service (USFS) will limit road use in the Diamond Mountain, Wildcat Ridge area in Zone X-6a during the rifle deer season. The accompanying map shows the area where vehicle access will not be permitted. The vehicle closure area has been in affect since 1984. The boundaries for the vehicle closure area are the same as in recent years.

Objectives of reducing traffic during the deer season are to curb excessive disturbance of deer and to improve the hunting experience of hunters. For years hunters have called upon both the DFG and USFS to institute road closures for deer season.

The vehicle closure project will take effect beginning three days prior to the first day of rifle deer season in Zone X-6a, and will continue through the conclusion of the rifle deer season. The affected area comprises approximately 16 square miles.

You are invited to submit your comments on the road closure to: California Department of Fish and Game, Sacramento Valley Central Sierra Region, 1701 Nimbus Rd., Rancho Cordova, CA 95670; Plumas County Fish and Game Commission, 39006 Highway 70, Quincy, CA 95971; USDA-Forest Service, Quincy-Greenville District Ranger, 36696 Highway 70, Quincy, CA 95971.
